

GEMTRAC
By Russ Bassett

HIGH DENSITY FILING FOR
16MM & 35MM ROLL FILM

This check processing department at a major bank utilizes 9 Gemtrac units to house over 64,000 rolls of film in just 225 square feet of floor space.

Store Up To 7,140 Rolls In 25 Square Feet

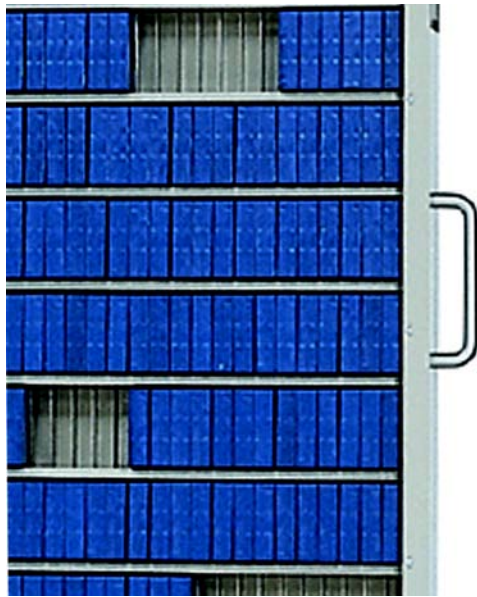

STORE MORE ROLLS PER SQUARE FOOT THAN ANY OTHER STORAGE SYSTEM

The most significant aspect of Gemtrac's design is the dramatic reduction in floor space usage compared to other storage systems. By eliminating all unnecessary aisle space, the Gemtrac system can accommodate up to 7,140 rolls of film in just 25 square feet. Think, for a moment, about how much you're paying for aisle space alone. If you could downsize your roll film storage area and increase capacity for future storage, what could you do with the space you would gain? Would you turn the "liability" into an "asset" by creating an additional revenue producing office or suite?

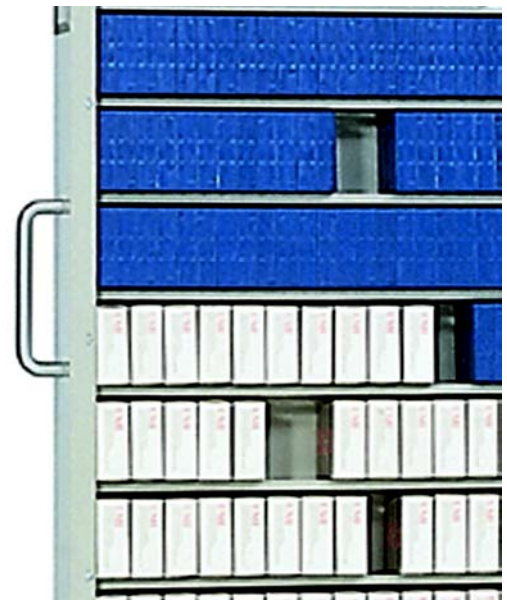

VIEW UP TO 595 ROLLS OF FILM BY OPENING ONE DRAWER

Gemtrac enhances productivity by reducing the time required to retrieve a roll of film. By opening a single drawer, the user will have instant access to 595 rolls. Compare that to only 130 rolls per drawer in a conventional roll film cabinet. The Gemtrac user will spend less than one-fourth the time opening and closing drawers. Gemtrac is the high density, quick access filing system of the future, and it's here today.

ALUMINUM DIVIDERS

PLASTIC COMPRESSORS

Two Ways To Reserve Filing Space For Each Carton Or Cartridge

For many collections, filing integrity is the primary concern. Media must be organized in a systematic and accurate manner. To address this requirement, Gemtracs utilize either of two "media specific" shelf designs to reserve a space for each carton or cartridge.

ALUMINUM DIVIDERS

Gemtracs with aluminum dividers,

available only for 16mm collections, provide individual slots for each item. Rolls are filed vertically.

PLASTIC COMPRESSOR

Gemtracs with Plastic Compressors accommodate both 16 and 35mm roll film. Cartons or cartridges are filed vertically on open shelves. Each item, held gently

yet firmly in place by the overhead Plastic Compressor, has its own reserved space and can be quickly retrieved and returned with total filing integrity ensured.

Both shelf styles also ensure that media will not tip over even when the drawer is firmly opened or closed. And, to make filing and retrieval as easy as possible, generous finger room is provided above and below each shelf.

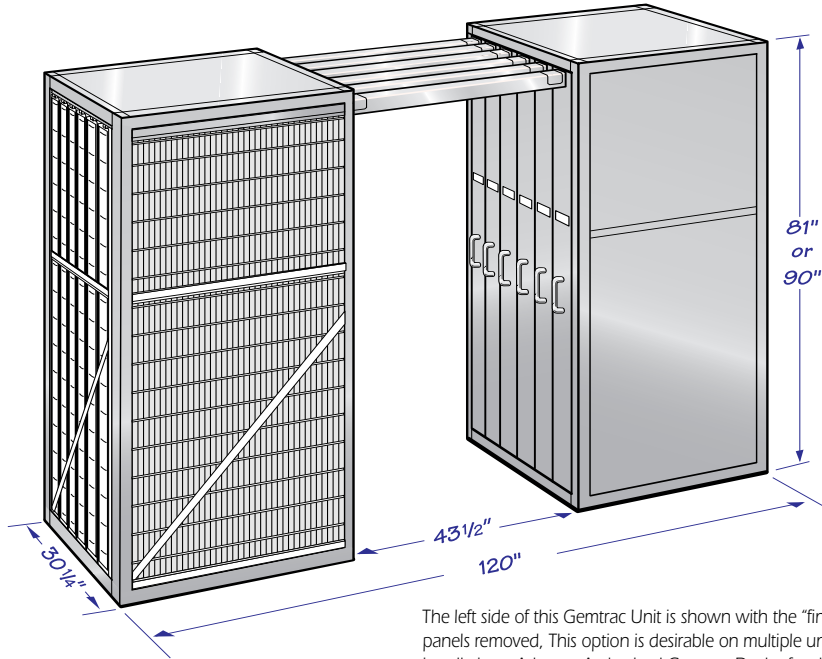

INSTALLATION IS QUICK AND EASY

Gemtracs ship with each cabinet fully assembled, drawers and all. When the unit arrives, the two cabinets are placed in position facing each other, leveled and the connecting tracks are installed. No floor tracks or other preparation is necessary.

All Gemtrac drawers provide generous finger room above and below each roll for easy retrieval.

MODEL	DESCRIPTION	NO. OF DRAWERS	CAPACITY PER CABINET		DIMENSIONS		
			16mm	35mm	H"	W"	D"
GD-81-Roll-D	81" Unit w/Dividers	12	5,940		81	30 1/4	120
GD-90-Roll-D	90" Unit w/Dividers	12	6,732		90	30 1/4	120
GD-81-Roll-PC	81" Unit w/Compressor	12	6,300	3,780	81	30 1/4	120
GD-90-Roll-PC	90" Unit w/Compressor	12	7,140	4,284	90	30 1/4	120

The left side of this Gemtrac Unit is shown with the "finish" panels removed. This option is desirable on multiple unit installations. Ask your Authorized Gemtrac Dealer for details.

Gemtrac, Designed To Save Space, Built To Last

OVERHEAD TRACKS KEEP AISLES CLEAR

Drawers open and close with ease, time after time, because they are suspended overhead from steel tracks and glide smoothly on precision roller bearings. No obstruction of aisles, no need for costly floor preparation, and installation is quick and easy.

IT'S THE LITTLE THINGS THAT COUNT

Many of Gemtrac's key features are tough to spot at a glance. Like leveling glides on all corners to ensure perfect cabinet alignment. Or label holders on every drawer front to identify drawer contents. Gemtrac's fully-welded structural framework has been designed for the extreme loads typical of high density filing. And to keep your cabinet's "showroom" appearance for years, we utilize an extremely durable and archivally-safe powder coat finish.

A UNIQUE ADVANTAGE FOR MULTIPLE CABINET INSTALLATIONS

The basic Gemtrac cabinet is designed as an open frame into which drawers, rails and hardware are installed. If the unit is a "stand-alone" unit, it typically gets enclosed with side and back panels. If the unit is destined to be one of many in a multiple cabinet installation, side and back panels are only included on units that will be exposed. The benefits of this design are reduced shipping weight, reduced floor loading and a lower cost on multiple unit installations.

PRECISION ROLLER BEARINGS
Gemtrac drawers are suspended overhead on precision roller bearings which allow ultra-smooth opening and closing, time after time.

HEAVY DUTY OVERHEAD RAILS
Sturdy all-steel overhead rails are engineered to safely suspend the heavy loads typical of densely filed media. And they keep the aisle free of obstructions.

OPTIONAL GANG LOCK
Media filed in Gemtrac is usually quite valuable. Optional gang locks provide an added level of security.

DIVIDERS
Individual slots are created in the Gemtrac drawers with vertical aluminum dividers. The spacing is precisely calculated for specific media formats.

PLASTIC COMPRESSORS
Gemtrac drawers utilizing our patented Plastic Compressor, also reserve space for each cartridge. The added benefit is a more open approach to filing, ideal for very active collections.

Because our total focus is directed towards achieving maximum filing density, on storing more in less space, we recognize the almost endless filing and storage possibilities inherent in our cabinets. So, to address non-standard and unusual filing requirements, we developed the Gemtrac line. The shelves in a Gemtrac are adjustable in 1/2" increments to accommodate mixed or changing media collections. Do you have a peculiar or extraordinary filing or storage need involving large quantities of small to medium sized items? Just give your local authorized Gemtrac dealer a call for truly professional assistance.

For Specialized Filing & Storage Requirements: The Adjustable Gemtrac

Our "Roll Film & Fiche" catalog offers a complete line of high density cabinets and open shelving systems for roll film, fiche and aperture cards.

Our "Visu-Flex" catalog includes a broad selection of carousels and small stackable cabinets for all microforms and compact discs.

More Filing Options For Micrographic Media

All Russ Bassett steel products are powder coated. Powder coat finishes are extremely durable and scratch resistant. In fact, powder coating is often used to finish outdoor furniture. In addition to durability, powder coating has been specified by the U. S. National Archives because of its stability. The powder coating process generates no harmful emissions or waste products and is clearly environmentally friendly.

Powder Coat Finish

10 YEAR WARRANTY

All cabinets included within this catalog are warranted to be free from defects in workmanship and material for ten full years.

FLAT RATE DELIVERY

With our unique shipping plan, your unit(s) will arrive free of damage and be delivered dock-to-dock for the specified Flat Rate Delivery Charge on the original invoice.

SAFE SHIP WARRANTY

We have long realized that having a superior product means little if it arrives in less than perfect condition. Consequently, we provide our customers with a solid Safe Ship Promise. Should a Russ Bassett product sustain damage during shipping, we will replace the unit absolutely free, eliminating the frustrating and costly freight claim ordeal.
